

Pacific Green Sea Turtles and the San Gabriel River

Covering 689 square miles of the Los Angeles area, the San Gabriel River watershed is home to a population of 2.7 million people, as well as a population of Pacific Green Sea Turtles (*Chelonia mydas*). Since 2012, volunteers with the Southern California Sea Turtle Monitoring Project have conducted a monthly population count at ten stations along a 1.5 mile stretch of the river. Though the population is thriving, the sea turtles face a myriad of threats including urban runoff, physical and chemical pollution, habitat loss, power generation, and decades of oil drilling.
